SIGNIFICANCE OF THE STUDY

The introduction of IPO grading is an attempt to provide investors with extra information to ease their appraisal of equity issues made available via an IPO. It is possible to conduct IPO grading before or after submitting the draught offer papers to SEBI. There must, however, be a listing of any and all credit ratings agencies (CRAs) that were consulted by the firm in order to grade its initial public offering (IPO). The firm that plans to do an initial public offering (IPO) must pay for the costs of grading the IPO. If the draught IPO offer document was submitted to SEBI, the business must get an IPO grade from at least one CRA. According to the DIP Guidelines, regardless of whether an issuer is satisfied with the rating assigned by the rating agency, the grade must be published. The issuer, on the other hand, may choose to have a separate agency grade the bond. Any IPO grades achieved will have to be declared in the offering materials, marketing, and so on. As soon as the offer document is submitted to SEBI, the IPO grading process is supposed to begin. The grading procedure for IPOs is not likely to prolong the issuing process since SEBI's observations and the grading process work separately (chittorgarh.com). According to the standards of an initial public offering (IPO) grading, a company's prospects for the industry it works in, the company's competitive strengths, as well as the company's financial situation, are all taken into consideration.

CHAPTER SCHEME FOR THESIS

Sequence	Name	Contents
1	Title Page	Title of the Thesis,University logo,researcher's name,supervisor's name,program name and,year.
2	Abstract	A summary of the research aim and objectives,literature review findings,research gap,methodology,findings,conclusion.
3	Acknowledgements	A note of appreciation to the contributors and silent supporters of the research. Keep the statement short and mention the names of the people and their role in the research.
4	Table of contents	Lists every element of every thesis section sequentially. It also presents its corresponding page number. There are tools to generate it
5	Introduction Chapter	Background of the study,research gap,aim and objectives,research questions,the significance of the study,chapterisation scheme,the scope of the
6	Literature review chapter	Synthesis of at least 30 studies conducted recently on the topic,critical review,theoretical framework,empirical review or systematic
7	Research methodology chapter	Research type or strategy,data type,research philosophy,sampling plan (target population characteristics, sample size, sampling type),data collection process,questionnaire format,data
8	Data analysis chapter	Introduction,Survey:demographic profile,general background,inferential analysis (hypothesis
9	Discussion and findings chapter	Introduction,findings of secondary research,findings of primary
10	Conclusion and recommendations	Introduction,conclusion (arranged research-question wise),recommendations,limitations of the study,scope for further
11	Appendices	results from primary data analysis
